CONTENTS OF VOLUME THIRTY-SEVEN

NUMBER 1. *Nutrition of Man*

Scientific Editor: J C WATERLOW

	PAGE
Introduction — *Elsie M Widdowson*	1
Nutrition and protein turnover in man — *J C Waterlow & A A Jackson*	5
Protein nutrition in clinical practice — *Khursheed N Jeejeebhoy*	11
The biochemistry and physiology of kwashiorkor and marasmus — *W A Coward & P G Lunn*	19
Physiology of iron absorption and supplementation — *B S Narasinga Rao*	25
Trace elements: potential importance in human nutrition with particular reference to zinc and vanadium — *Michael H N Golden & Barbara E Golden*	31
Biochemical and clinical aspects of vitamin D function — *D R Fraser*	37
Thermogenesis and obesity — *W P T James & P Trayhurn*	43
Diet and coronary heart disease — *M F Oliver*	49
Essential fatty acid deficiency — *J P W Rivers & T L Frankel*	59
Dietary fibre — *John H Cummings*	65
Nutrition, bacteria and the gut — *M S Gracey*	71
Lactation and infant nutrition — *M G M Rowland, Alison A Paul & R G Whitehead*	77
Nutrition and ageing — *Hamish N Munro*	83
Immunocompetence as a functional index of nutritional status — *R K Chandra*	89
Diet, neurotransmitters and brain function — *G H Anderson*	95

Notes on Contributors 101

NUMBER 2. *Psychobiology*

Scientific Editors: D M WARBURTON & A SUMMERFIELD

	PAGE
Introduction — *D M Warburton*	105
Gene action and the analysis of behaviour — *B Burnet & K J Connolly*	107
Biometrical genetics and individual differences — *D W Fulker*	115
Neurochemistry of behaviour — *D M Warburton*	121
The control of drinking — *B J Rolls & E T Rolls*	127
Central nervous mechanisms related to feeding and appetite — *E T Rolls*	131
The physiology of appetite — *D A Booth*	135
Intracranial self-stimulation — *Peter Redgrave & Paul Dean*	141
Motor control — *Susan D Iversen*	147
Hormones and human sexual behaviour — *John Bancroft*	153
Ontogeny of behaviour — *Patrick Bateson*	159
Conditioning and associative learning — *A Dickinson*	165
Control of internal activities — *Jasper Brener*	169
Brain mechanisms of mammalian memory — *David A Oakley*	175
Visual perception and perceptual disorder — *G Ratcliff & J E Ross*	181
Neurological impairment of cognitive processes — *Tim Shallice*	187
Anxiety as a paradigm case of emotion — *J A Gray*	193
Psychophysiology of abnormal behaviour — *P H Venables*	199

Notes on Contributors 205

NUMBER 3. *Control of Growth*

Scientific Editor: J M TANNER

		PAGE
Introduction	*J M Tanner*	207
Control of cell reproduction	*Sydney Shall*	209
Cellular basis of skeletal growth during development	*L Wolpert*	215
Growth and its control in early mammalian development	*M H L Snow*	221
Regeneration and compensatory growth	*Nigel Holder*	227
Catch-up growth in man	*J M Tanner*	233
Genetics of growth	*D F Roberts*	239
Mathematical modelling of individual growth curves	*M A Preece & Ingeborg Heinrich*	247
Ultrasound assessment of fetal growth patterns	*Hylton B Meire*	253
Factors related to birth weight and perinatal mortality	*Harvey Goldstein*	259
Genetic and environmental factors in the control of growth in childhood	*Roberto J Rona*	265
Geographical and ethnic variations in human growth	*W A Marshall*	273
Endocrinological control of growth at puberty	*C G D Brook*	281
Adipose tissue cellularity in childhood in relation to the development of obesity	*Anders Häger*	287
The effect of chromosome abnormalities on human growth	*Shirley G Ratcliffe*	291
Dysmorphology and short stature	*J M Parkin*	297

Notes on Contributors 303

INDEX TO VOLUME THIRTY-SEVEN

A

Activities, internal, control, 169–174
Acetylcholine as neural transmitter in behaviour, 122
Adaptation, behavioural, sources, 160
Adipose tissue, brown, and thermogenesis, 44
———modulations, and response to feeding, 46
——cellularity in childhood, relation to obesity, 287–290
Adolescence, growth spurt in, 283
Ageing and nutrition, 83–88
—body composition changes in, 83
—effect on organ and tissue function, 84
—metabolic changes, 84
—nutrient needs of elderly, 86
Alcohol, effect on coronary heart disease incidence, 53
Amblyopia, contrast sensitivity in, 181
—functional deficit in, 181
—visual function in, 182
Amino acids and energy, interrelationships, 15
——branched-chain, and protein synthesis, 16
——dose in clinical malnutrition, 15
——essential, α-keto acids of, 16
——quality and route of administration in malnutrition, 14
γ-Aminobutyric acid, 194
ANDERSON G H: Diet, neurotransmitters and brain function, 95–100
Androgen administration, effect on sexual behaviour, 155, 156, 157
—production at puberty, 281
Anorexia, protein metabolism changes in, 11
Antidiuretic hormone, 128, 129
Anxiety, anti-anxiety drugs, behavioural effects, 193
—as paradigm case of emotion, 193–197
Aphasia, bilateral tactile, 190
—optic, 190
Appetite, metabolic satiety, 136
—physiology, 135–140
—related central nervous mechanisms, 131–134
—starch-conditioned, 137
—suppression, starch-derived, 136
Associative learning and conditioning, 165–168
Atheroma, regression, 55
Atherosclerosis, dietary prevention, 55
Attention disorders, psychophysiological studies, 200

B

BANCROFT J: Hormones and human sexual behaviour, 153–158
BATESON P: Ontogeny of behaviour, 159–164
Behaviour, abnormal, psychophysiology of, 199–203
—adaptedness, sources, 160
—animal, analysis, 116
—central nervous system transmitters, 121
—chemical transmitter coding, 121
—development, analysis, 163
——regulation, 163
——sensitive periods, 162
——stages, 162
—genetics, 107–113, 116
—human, analysis, 118
——biometrical analysis, 115–120
——implications of neurochemical behaviour, 124
—innate, 160
—labile, 161
—multiple influences on, 161
—neurochemistry, 121–125
—neurological mutations, 112
—ontogeny, 159–164
—origins, 159
—sources of individual differences, 159
—stable, 161
Behavioural pleiotropy, 110
Benzodiazepines, 194
Biofeedback of visceral activity, 169
Biographical notes on contributors, 101, 205, 303

Birth weight and perinatal mortality, related factors, 259–264
——effect of gestation length, 261
——genetic influence, 242
"Blindsight", 183
Body fat, changes at puberty, 284
——estimation in childhood, 287
—fluid volumes, regulation in protein-energy malnutrition, 21
—weight for height, geographical and ethnic variations, 275
Bone age, geographical and ethnic variations, 277
—diseases affecting growth, 297, 298
—growth plates, 217
—vitamin D function in, 38
BOOTH D A: The physiology of appetite, 135–140
Brain function and diet, 95–100
—lateral dysfunction in psychoses, 202
—lesions, effect on visual perception, 183, 184
—mechanisms of memory, 175–180
—nutrient metabolism, 95
Breast development at puberty, 283
—feeding, optimization, 81
—milk, nutritional implications, 79
——output, 78
BRENER J: Control of internal activities, 169–174
BROOK C G D: Endocrinological control of growth at puberty, 281–285
BURNET B & CONNOLLY K J: Gene action and the analysis of behaviour, 107–113

C

Carbohydrate diet, relation to coronary heart disease incidence, 52
Cartilage, cellular basis of growth, 216, 217
Catecholamine pathways, role in feeding, 134
Cells, cycle, 210
——theories of, 213
—geometry, 212
—growth factors, 212
—mortality and immortality, 213
—reproduction, characteristics, 209
——control, 209–214
——in intact animals, 210
——theories of, 213
—spatial distribution, 212
Cellulose, fate in gut, 65, 68
Cerebellum, neurophysiology, 149
CHANDRA R K: Immunocompetence as a functional index of nutritional status, 89–94
Child, growth rate, regulation, 233
—stature, geographical and ethnic variations, 274
—weight for height, geographical and ethnic variations, 275
Childhood growth, effect of genetic and environmental factors, 265–272
Cholesterol concentrations and coronary heart disease, 49, 51
Cholinergic arousal pathway, function, 123, 124
Chromium, importance in nutrition, 31
Chromosome abnormalities, effect on growth, 291–295, 297
—in fetal growth, 242
Cognition, development, 119
Cognitive processes, modularity, 187
——neurological impairment, 187–192
Colliculus, superior, effect of lesions, 183
——physiology, 183
Conditioning and associative learning, 165–168
—and causal relevance, 167
—and learned irrelevance, 166
—event correlations in, 165
CONNOLLY K J, *see* BURNET B, 107
Contributors, biographical notes on, 101, 205, 303
Copper, importance in nutrition, 31
Coronary heart disease, *see* Heart disease, coronary
Corpus striatum, lesions, effect on visual perception, 184
Cortex, extrastriate, and disorders of sensory analysis, 184
COWARD W A & LUNN P G: The biochemistry and physiology of kwashiorkor and marasmus, 19–24
CUMMINGS J H: Dietary fibre, 65–70

D

DEAN P, *see* REDGRAVE P, 141
DICKINSON A: Conditioning and associative learning, 165–168
Diet, neurotransmitters and brain function, 95–100
—relation to coronary heart disease, 49–58
—unbalanced, effect on protein metabolism, 11
Dopamine neurones, stimulation, and intracranial self-stimulation, 144
—transmission and intracranial self-stimulation, 145
Down syndrome, effect on growth, 291
Drinking, cellular stimuli, 127
—control, 127–130
—extracellular thirst stimuli, 127
—maintenance and termination, 129
Drosophila, behavioural systems, 109
—chromosomes, 108
—sexual behaviour, 109
Drugs, teratogenic effects, 299
Dyslexia, deep, 187, 188, 190
—neglect, 188
—word-form, 189
Dyslexic syndromes, acquired, 187
Dysmorphology and short stature, 297–302

E

Eating, neural control in man, 133
Edwards syndrome, effect on growth, 292
Elderly, nutrient needs, 86
Embryo, growth, analysis, 223
——effect of maternal genotype, 221
——manipulations before and after implantation, 223
——profiles, 222
Emotion, anxiety as, 193
Enteropathy, protein-losing, 12
Environment–genotype interaction, 117
Environmental factors in growth control in childhood, 265
Exercise tolerance, effect of puberty, 284

F

Fat, changes at puberty, 284
Fat-cell growth in infants, children and adolescents, 288
—number, determination in childhood, 288
—size, determination in childhood, 287
Fatty acids, dietary, and coronary heart disease, 51
————and myocardial metabolism, 54
——essential, and thrombosis, 53
————biochemistry, 59
————deficiency, 59–64
————and coronary heart disease, 52, 53
————in aetiology of disease, 63
————requirements, 61
————status, assessment, 62
——volatile, production in colon, 69
Feeding, related central nervous mechanisms, 131–134
—role of catecholamine pathways, 134
—role of lateral hypothalamus, 131
—role of ventromedial hypothalamus, 133
Fetus, growth, genetic aspects, 239–242
——patterns, ultrasound assessment, 253–258
——role of chromosomes, 242
Fibre, dietary, 65–70
——and coronary heart disease incidence, 52
——definition of, 65
——fate in gut, 65, 68
——site of breakdown in gut, 67
Food, iron content, absorption, 26
—taste and sight, central nervous responses, 131
FRANKEL T L, *see* RIVERS J P W, 59
FRASER D R: Biochemical and clinical aspects of vitamin D function, 37–42
FULKER D W: Biometrical genetics and individual differences, 115–120

G

Gamma-aminobutyric acid, *see* γ-Aminobutyric acid
Ganglia, basal, neurophysiological studies, 149
Gas production in the intestine, 69
Gastrointestinal mucosa, microflora, 73
Gene, abnormalities affecting growth, 298
—action and analysis of behaviour, 107–113, 116
Genes, control of height, 266
—pleiotropic, 110
Genetic factors in growth control in childhood, 265
Genetics, biometrical, and individual differences, 115–120
——development, 115
—of growth, 239–246
Genotype–environment interaction, 117

Gestation length, effect on birth weight and perinatal mortality, 261
GOLDEN B E, *see* GOLDEN M H N, 31
GOLDEN M H N & GOLDEN B E: Trace elements: potential importance in human nutrition with particular reference to zinc and vanadium, 31–36
GOLDSTEIN H: Factors related to birth weight and perinatal mortality, 259–264
Gonadotropin and reproduction, 282
—secretion, organizing effect on sexual behaviour, 154
GRACEY M S: Nutrition, bacteria and the gut, 71–75
GRAY J A: Anxiety as a paradigm case of emotion, 193–197
Growth, adolescent, models for, 248, 249
—and welfare policy, 271
—at puberty, endocrinological control, 281–285
—catch-up, as normal phenomenon in infancy, 236
——in man, 233–238
—compensatory, 231, 233, 234
—control of, 207–302
——genetic and environmental factors, 265–272
——in early mammalian development 221–226
——introduction to symposium, 207–208
—curves, mathematical modelling, 247–252
—effect of chromosome abnormalities, 291–295, 297
—effect of illnesses in childhood, 270
—failure, pathogenesis, 301
—fetal, genetic aspects, 239–242
——ultrasound assessment, 253–258
—genetics, 239–246
—geographical and ethnic variations, 273–279
—hormone, deficiency, 235
—humoral regulation, 231
—in ecological extremes, 277
—in infancy, 77
—patterns, and rate of maturation, 276
—postnatal, genetic influence, 243–246
—pre-adolescent, models for, 247, 249
—regulation, model for, 237
—relation to maternal care, 269
—skeletal, during development, cellular basis, 215–219
—spurt in adolescence, 283
Gut, microflora, control, 71

H

HÄGER A: Adipose tissue cellularity in childhood in relation to the development of obesity, 287–290
Heart disease, coronary, dietary prevention, 55
————epidemiology, 49
————relation to diet, 49–58
Height, adult, geographical and ethnic variations, 273
—and body weight, geographical and ethnic variations, 275
—in childhood, geographical and ethnic variations, 274
—variation, genetic aspect, 266
HEINRICH I, *see* PREECE M A, 247

Turner syndrome, growth in, 294, 298

U

Ultrasound assessment of fetal growth patterns, 253–258

V

Vanadium, importance in nutrition, 35

VENABLES P H: Psychophysiology of abnormal behaviour, 199–203
Visceral activity, relation between detection and control, 172
—control, differentiation, 170
——learned, 169
—learning, as model for studying visceral control, 171
——biofeedback, 171
Visceral–somatic interactions, 169
Visual pathway, contrast sensitivity, 181
—perception, and perceptual disorder, 181–186
——effect of cerebral lesions, 183, 184
Vitamin D deficiency, effects, 40
——function, biochemical and clinical aspects, 37–42
————in bone, 38
————in kidney, 38
————in muscle, 39
————in small intestinal mucosa, 38
——metabolism, functional, 37
——resistance, genetically determined, 41
——supply problem, 39
Vitamins, effects on brain function, 99
—effects on neurotransmitter metabolism, 98

W

WARBURTON D M: Neurochemistry of behaviour, 121–125
—Psychobiology. Introduction to symposium, 105–106
Water balance in protein-energy malnutrition, 21
WATERLOW J C & JACKSON A A: Nutrition and protein turnover in man, 5–10
WHITEHEAD R G, *see* ROWLAND M G M, 77
WIDDOWSON E: Nutrition of man. Introduction to symposium, 1–4
WOLPERT L: Cellular basis of skeletal growth during development, 215–219

Z

Zinc, importance in nutrition, 32
